VIper4Win Keymacro is a Software that is designed to increase the usability of computers, and it is particularly useful for creating macros, and it consists in several modules. Now you can create a macro for anything, it has a lot of modules that are integrated, easy to use, so what are you waiting? Features: - An incredible navigation keycomboser. - You can choose your keycomboser, and with the click of a button you can create a keycomboser that suits you. - Great keycomboser, without compatibility problems, even the program is compatible with older programs. - You can create keycombos that allow you to activate a whole lot of programs, or you can create keycomas that activate the functionality of a specific program, or you can create keycomas that activate a specific program that you want to be run automatically at the start of the computer. - 2.1 keycomas - 3.5 keycomas - Ability to select the keycomas keycombos. - Keycombos can be set to be run when the computer turns on. - You can run the keycombos from windows XP or Windows 7. - Easy to use and very functional. Added new keycombos! - keycombos that activate programs that are not installed, such as MSN, NetZero or Cablez. - Keycomas that activate programs that are not installed, such as MSN, NetZero or Cablez. You can activate the keycomas, and they will appear on the interface, you only need to activate them using a single mouse click. This Program is a fantastic keycomboser. And it's free! Disclaimer: * If you are running any antivirus software in your computer, you have to remove it first, because the program uses a special program called OTCall.exe * The program uses all the space of the C drive. If you have it on another drive you will have to change the drive path in the program. * The program only saves the keycombos in the C drive. If you want to save them elsewhere, you will have to install the driver to the other drive. * There is no option to save the keycombos.
