Download Unigraphics CAD Unigraphics CAD, is a 3D modeler used for creating engineering drawings for architectural projects, mechanical parts, design and prototype manufacturing. It was originally released in 1986 by Unigraphics Ltd, and was later acquired by Rational Software in 1996. Unigraphics CAD still remains under Unigraphics Ltd. A commercial version is available that includes the ability to create 3D models, view models and a workspace. AJAX & AJAX-Elements In January 2009, the graphical user interface (GUI) in AutoCAD 2009 was re-implemented in AJAX. This was a major redesign of the interface, removing the tree-view and replacing it with an

explorer-like interface (that is, a list of icons that the user can select, rather than a list of items in a window). In some cases, the AJAX interface includes programmable JavaScript, C++ or other scripting languages, which are called AJAX-elements. Ajax is a set of methods for creating and manipulating dynamic web pages that use the XML data format. These methods are coded in JavaScript and, in the AJAX-Elements, are coded in C++. The XML data format that AJAX uses (as a replacement for the traditional HTML data format) allows the web pages to be generated without a server component. Another benefit of AJAX is the ability to create responsive web pages, where the display window can be made to fit to the size of the web browser window. This means that web pages need not be reloaded each time the user changes the window size. Although there are other options available to reduce the number of reloads (such as using AJAX-Elements that update the screen when new information becomes available) and web browsers (for example, Chrome or Opera Mini), the method used by the AutoCAD team to make the changes in their web pages was to refresh the entire page, even though only a portion of the page was updated. The team decided that the benefits of this method outweighed the problems of the flash of new content between the time the new page was generated and the time that the content was displayed. By 2017, AJAX became the preferred method for customizing the user interface in Autodesk applications, and the AJAX interface is found on many of the product teams in Autodesk.
