In addition to a Windows client and server application that manage tasks on the desktop, AutoCAD includes a web service-based API (application program interface) that lets third-party software apps and tools interact with AutoCAD. For example, the API is the interface that enables a web-based user interface (UI) for viewing and editing work pieces, exchanging data with other applications and running macros. The API also provides a set of tools that allow you to make application programming interface (API)-based connections to AutoCAD from other software. The AutoCAD Architecture There are two major AutoCAD implementations: Web Services and Classic. The Web Services architecture defines the AutoCAD web services APIs, which are hosted as a service on the cloud.
