It was the first AutoCAD program to include a spreadsheet. This was replaced by Microsoft Excel for AutoCAD 2007. AutoCAD is used in the design of aircraft, wind turbine farms, bridges, ships, motorways, and buildings. It can be used to create three-dimensional models of these and their interiors. AutoCAD is used as a platform for construction estimating software. J. Robert Boyce, NASA's former head of aeronautics and astronautics engineering, said that the "... autocad ... program could be the single most important, significant, significant piece of work we have done on the space program. The greatest thing I ever saw in the space program, in the history of the space program, was the use of Autodesk in the design of the space station." What's New In?

Added the ability to format input text in your drawings automatically. For example, you can set the font size of input text based on the size of your model elements, automatically change text alignment based on the size of model elements, and more. Added the ability to apply a material color or material to the object on which you are placing text. (for example, text on a wall.) This allows you to specify the color of the text inline when you place it on a model element. Added the ability to place multiple lines of text on a single line. Added the ability to display a multi-tiered help icon at the top of your drawings, such as a tree with branches, which displays tips for each section of the drawing. Enabled the ability to zoom while using the markup assist tool. Added the ability to quickly switch between commands without first quitting the current command. For example, if you move while on the command line, you can click the green snap button without first selecting the command you want to execute next. Added the ability to designate which command you want to use when you select the green snap button. Added the ability to see progress bars when opening and saving files. This can be useful if you have a large file open, such as a CAD file. (example: 1:10 min.) Added the ability to have the command line display the name of the current command you are executing. Added the ability to enable border line spacing. Enabled the ability to continue working on a layout while a command is run. Added the ability to see how big your current models will look when you display your drawings in the layout mode. Added the ability to see how many pixel rows your drawings will use when you display your drawings in the layout mode. Added the ability to change the contrast settings in the find/replace dialog box. Added the ability to display polylines and spline handles with the same style and color as line segments and arcs. (example: 1:50 min.) Added the ability to quickly switch to a new command without quitting the current command. Added the ability to quickly switch to the next or previous command on the command line. Added the ability to quickly change the face of a line segment or polyline based on the next or previous command. (for example, you can quickly make a line segment look like a normal line segment or a polyline.)
