AutoCAD Product Key was an immediate success, selling over 100,000 copies in the first quarter of 1983, and 200,000 copies in the first quarter of 1984. Since then, annual sales have ranged between 12.5 and 20 million copies. It is estimated that AutoCAD Free Download accounts for around 75% of the global CAD market. In 2016, the last year for which data is available, AutoCAD Product Key was the world's highest-grossing CAD program, with total revenues of \$567 million.[1] AutoCAD is available for purchase in an upgrade or full version, with subscription plans available for schools, colleges, and businesses. Since 2001, AutoCAD also comes preinstalled on some new PC laptops. A smaller and less powerful alternative to AutoCAD called AutoCAD LT was also available, and continues to be sold separately. In recent years, AutoCAD LT has also been made available on Linux and macOS operating systems. Contents The AutoCAD program code was initially written in the machine code of the DEC PDP-11 minicomputer and in the S-100 assembly language programming language. It can also be used with the free visual Basic language, but the resulting file is not readable by other program applications and cannot be opened by other programs. The first available and complete release of AutoCAD was 1.0 in 1982, written in assembly language for the DEC PDP-11. The first modern computer language that AutoCAD used was Visual Basic, written for the Apple Macintosh.[2][3] The first AutoCAD released for the Macintosh, AutoCAD 2.0, was released in 1987. The standard version of AutoCAD for Windows was released in 1992, and it was the first CAD program that was ready to run in Microsoft Windows. AutoCAD was developed by Autodesk, a California company that originally focused on graphics. Prior to the release of AutoCAD, Autodesk had made an unsuccessful attempt to develop AutoCAD as a standalone app running on PCs. Autodesk began to develop CAD applications for personal computers only after its failed attempt. AutoCAD started to make inroads into the desktop CAD market in the 1980s and established itself as the standard CAD program of choice in many organizations. The original price of AutoCAD was US\$2,000.[4] It was available for the Apple II, DOS, MS-DOS, and Commodore 64 computer platforms. The first version
