Stop being an IT nightmare for your users by simply fixing those pesky permissions issues. Maintain group owner permissions and open up access to your documents in a few clicks and the results can be spectacular! This plugin allows users to maintain their own permissions on InDesign CS6 documents from "editors," "print experts," and "print managers." Without this plugin, your team's permission levels are probably set according to the current user on the device. That creates two problems. First, if a user creates a document with a view that is not under their authority, the request becomes their responsibility. Second, if a user creates an InDesign document with the user's permissions (and they don't understand permissions), they end up using the permissions that are associated with the current user on the device. If the current user is an accountant, the user can't request access to the manufacturing process in a report.
