You may have noticed the Network Spotlight icon being on the notification area. It will just not go away. Network Spotlight is bundled with Windows 10 and no longer requires the old Windows Service Network Monitor from the Windows XP era. Finding Devices using the Network Spotlight There are some improvements with Network Spotlight that make it easy to find devices that are connected to your home network. Let's say that you are in a work or college network and you want to find all your devices that are connected. You will do so by running Network Spotlight. Select the type of connection you want to find (wireless, ethernet, etc.). Then click the search button. The next time your device scans for devices, you should have a list showing all your devices that are connected to your network. Note: You can only find wireless devices if they are in the same network as your PC. If you try to use this feature with a device that is not in your network, you will only see a 09e8f5149f
