One of the best commercial AutoCAD alternatives is Sketchup. It's not free, but it can be used for free, and is a great free alternative to AutoCAD for basic models. Sketchup is available on Windows, Mac, and Linux. While I'm a huge fan of Sketchup, I'm also a huge fan of the sketchup extension moondraw that enables you to create, export, and share models with meld. I use Sketchup almost every day, so I wanted to create a tutorial that would help people who want to get started with Sketchup or Sketchup Pro, but don't want to invest in an entire Sketchup subscription. In the video below, you'll learn about the essential features of Sketchup that I think every Sketchup user should know about. In the video below, you'll learn how to open and close the Sketchup interface, how to create objects and export models, how to import objects from other applications, how to add lighting and viewport, how to create layers and work on them with selection tools, how to work with the stencil tool, how to draw with a pen, how to use textures to add realism, how to edit existing layers, how to switch modes, and more. As you can see in the video below, I use Sketchup from start to finish. Sketchup starts up on my Mac in portrait orientation so I can view the model on my laptop's display, and then I save the model as a DXF file, load it up in AutoCAD, and view it there. This video shows you how to save and export Sketchup models as DXF files. In the video below, I show you how to work with the most common Sketchup commands. You'll learn how to add dimensions, change the units, create a project, and more. Before you continue, be sure to read the disclaimer below. You will need to have Sketchup installed to follow along with the video. If you need to download Sketchup for free, you can do so here. Disclosure: As always, I work as a hobbyist using Sketchup and AutoCAD. I'm just like the average Sketchup user, trying to find tools that help me make professional looking drawings and AutoCAD models. I do not make a dime from my work. If you want to see my paystub, you'll have to hire me. :)
