To begin the cleaning, you have to decide whether you want to use the clean registry mode or the

standard mode. However, this is not the only difference between the two modes, since the standard mode is also able to create a complete backup of the registry. in shape, while enjoying the same performance as in the first day after installing Windows. RegSupreme Pro comes to lend you a hand when trying to deal with the computer's registry, offering not only a tool to clean invalid entries and fix problems, but also dedicated utilities to get more info or manage this hidden side of the operating system. Clear-cut layout and a short description of all available tools The interface is clean and straightforward and all features are displayed directly into the main window.

---

You can thus open the “Registry Manager,” solve some issues with the help of “Registry Cleaner,” go for the “Registry Compactor” or stay up to date with what's happening by checking “Registry Information.” You can also find more details about your computer with “Software Manager,” control the tools that run at startup with “Startup Manager” and stay private or clean space with “History Cleaner.” Each of the aforementioned functions comes with its very own set of sub-features, so you will most

---

likely spend some time to get used to them. Parameters you can tweak Before starting the registry cleaner for example, you have to choose engine settings, decide whether to go into advanced engine settings and choose which scans to perform, pick a scanning mode (normal or reference), decide how you want to see the results (as a structured list or as a raw one), write down some search words to search the registry or input the ignored ones. Create a backup The actual scan takes less than a minute, while cleaning and fixing things

---

depends on the user and how much time one needs to make sure they are on the safe side. In order to rest assured nothing bad happens, RegSupreme Pro prompts the user to decide whether to make a backup or not, prior to running a new action. A last evaluation The good thing about RegSupreme Pro is definitely the amount of features that users can employ to work with the registry in the most professional way. All things considered, the conclusion is that RegSupreme Pro is a good way to have a look under the hood of your

---

registry. However, you should keep in mind that this tool has been discontinued and thus, you might run in some problems from time to time. A: My advice would be, don't install any registry cleaners until you're pretty sure there are problems. Also, if you're getting frequent crashes, uninstall any cleaners you're using until you can reproduce the crashes with a small set of changes
