I mean, sure I could have stayed home and watched the Birdhouse Moms go into hysterics over some administration's bureaucratic paper-pushing decisions, but what if they went ahead and awarded this particular non-profit the grant in spite of its lack of viable plan? And what about the real business community? My gosh, all that money. And I don't mean to pick on the administration, but what would the real business community do with all that money? For

one thing, they'd invest in real business, wouldn't they? I came in to work because if they'd given the grant to some other nonprofit I would have been all over them. And I'm afraid, if the bad news is true, they'll get away with it. Why, just last week one of our head honchos visited a local college here and told the students that there was no money, no money, it was really hard to make money and the best they could hope for was to survive, but they might just make it. I mean, the guy doesn't have any money either, but he sure can find money when he needs it. And it's not like he can't, either. I'm pretty sure that if they'd told the business community that they were about to lose the grant money, they'd have found a way to make it work. So what do you think? Are we in for some real disappointment here? Will the administration get away with it? Will they lose the grant money? How do you think they can get away with it? Leveraging a brand Brands help to build a sense of trust with your audience. Consumers tend to trust the values behind a brand name more than the brand itself. This is why it's important to build an emotional connection with your audience that will help them feel like your brand is trustworthy. You can do this through the use of a symbol and messaging that highlights your brand's positive values. These values should come across clearly in your imagery, website, and product packaging. Markup Import: Import existing text or sketches in the PDFs with existing CAD elements for more flexible feedback and design review. (video: 1:32 min.) Markup Assist: Use a selection mask to select specific areas on paper or PDFs to annotate and create in CAD. (video: 1:26 min.) To create a feedback and review collaboration environment, autoCAD includes features that enable you to work together in a web-based environment. With these new features, all of your users can collaborate and share feedback with each other from any desktop device, be it on the road, at the workplace or at home. These new features provide a robust sharing solution and help you work with CAD models in real time. All you need is an internet connection to ensure high performance and speed. Collaborate in real time with multiple devices: At home or on the road, share work with multiple devices and build a team through instant communications. AutoCAD 2023 uses your Internet connection to enable collaboration that

is always available, whether you are at home or on the road. Share drawings, schedules and work documents directly from AutoCAD 2023: In AutoCAD, you can share your designs and drawings directly from within the application, and all of your collaborators can connect in real time. The result: clear collaboration on all devices. Automatic synchronization to multiple mobile devices, including tablets and smartphones. The change log is integrated into the CAD drawing. This enables you to open, edit and review any changes in your drawing with your team right from your device. Your drawings are instantly synchronized to mobile devices. Search, filter, mark up, export, and import drawings directly from the Change Log. Share schedules and review work documents in real time: AutoCAD 2023 also supports real-time, secure access to work schedules and drawings. You can share schedules and review work documents right from within the application. All of the events are listed directly in the Change Log, enabling you to navigate to the information you need. Attach text, change, revise, comment, and filter changes to the work documents, or export and import the documents and schedules right from within the application. Use the new Searchable Task List, which can be exported and imported from the CAD software. The list enables you to search through all of your work documents,
