

[illegible]

The Vivo Y91 is the successor of Y81. there is an extra SIM slot in this phone unlike Y81 phone. In fact, Y91 is one of the best selling phone under Vivo in India. It is available in 4 variants, starting from 7,749 in Rs.In recent years, pursuant to the request of users for the miniaturization of portable electronic devices, the downsizing and the weight reduction of the conventional static type CRT have been further developed, and the application range of the electronic device incorporating a flat panel display has been extending. The development of the technique of the flat panel display has also progressed, and the capability has been improved. Accordingly, as a next step, it is required to develop a next generation flat panel display which has a higher performance and a larger display area, as well as has lower power consumption, for example, which makes it possible for a user of the flat panel display to carry an electronic device incorporating such a display in a pocket of his or her garment or the like. In order to meet such a demand, a display has been developed for directly driving a semiconductor device having a TFT structure (for example, a polysilicon TFT structure or a-Si TFT structure) which has an excellent response, and which can be used at a relatively low temperature. Such a display includes a display panel which is built by sandwiching a display-forming driver circuit and a liquid crystal between two substrates, and liquid crystals which are sealed between the two substrates. In general, the liquid crystal is prepared from a mixture liquid, such as a twisted nematic (TN) liquid crystal, or a super-twisted nematic (STN) liquid crystal, or the like, such that the liquid crystal layer is sealed between the two substrates. Thus, the liquid crystal is formed by a cell gap of several micrometers. In recent years, a guest-host (GH) liquid crystal display having a multi-layer polymer dispersion liquid crystal has also been proposed. It has been reported that, in such a guest-host liquid crystal display, the display capability is enhanced by using a reflection type GH liquid crystal which has a larger birefringence value as compared with a polarizing plate GH liquid crystal display having the TN liquid crystal. However, according to the liquid crystal display using the liquid crystal of a relatively low viscosity, which is used in a conventional display, as compared with the GH liquid crystal display, 3e33713323
