Audio / Video CDs Windows 95 audio CDs
are a type of CD-ROM containing sound
files rather than.CUE files. There are CDs
for music, game compilations, talking
books, and various other software CD-
ROMs. The majority of CDs are in the
Windows Media Audio (WMA) format.
Other audio CD formats such as RealAudio
and QuickTime are not supported by the
DOSBox front-end. The.EMU archive
format is supported by DOSBox, but

unfortunately, the front-end can only support EMU files generated from version 4.01 or later of RealPlayer and do not support older RealAudio and QuickTime audio CDs. Installing Audio CDs There are some caveats to installing WMAs from audio CDs. The first is that to install the CD, the user needs to be booted into DOSBox with the CD-ROM drive on drive c:. The second is that some copies of Windows 95 have not copied the entire contents of the disk to the hard drive. This second caveat applies to both NT-based Windows 95 and 16 bit versions of Windows 95 and Windows 3.1. One way to obtain a complete copy of the disk, is to use the CD-ROM Recovery Packet, which is available from Microsoft with DOSBox. Windows 95/NT Audio CDs can also be

burned into ISO 9660/Joliet-based CDs using Nero. For example, a single.WMA audio CD may contain about one.MTA (Master Track Audio) and one.MDA (Multimedia Device Audio) track. Ripping Audio CDs Audio CDs have become increasingly popular with the recording industry and have become somewhat of a standard medium to distribute recorded music. It is possible to rip Audio CDs to formats such as Windows Media Audio. DOSBox can use the exfat.img archive format to read and write.WMA files. Other formats such as RealAudio and Quicktime audio CDs can be read by DOSBox using its.EMU archive format. Currently, exfat.img can only read exfat formatted 1cb139a0ed
