Update to marked, reviewed, and approved sections in your drawing. There's a new Markup button in the Ribbon menu (Ribbon > Draw/Design Tools > Markup Assistant > Markup) to help streamline the editing process. If your work is already checked in to the VCS, AutoCAD can be configured to recognize this Markup state and automatically import feedback from the marked/reviewed/approved sections in the drawing. There's also a new Markup Assistant that allows you to export a list of all marked, reviewed, and approved sections. Now, when you export a drawing from the Markup Assistant you can specify where the drawings are to be published. Previously, the drawings were published to a single location and there was no option to publish to different locations. You can now mark the line endings, endpoints, and centers of lines and arcs with the Center, End, and Line End points tools. The Line Endpoint and Arc Endpoint tools are now available with the Join or Unjoin tool, which simplifies the process of creating multiple lines or arcs. (video: 1:06 min.) With the Line Endpoints and Arc Endpoints tools, you can now edit the center and endpoint, as well as the starting and ending positions of a line or arc. Edit the Width and Offset properties of lines and arcs to control the look of the line or arc. (video: 1:03 min.) You can now edit the width and offset of text strings on the screen. This tool is used in the DesignCenter to edit the width and offset of text strings when viewing a 3D model. (video: 1:00 min.) New screen tips for the Connect tool include: You can now specify a connection type for lines and arcs when you draw them. You can choose from Arc-arc, Arc-line, or Line-line. You can now specify a 3D model for AutoCAD to display. You can select the 3D tab in the Preferences dialog box and then select the existing 3D model or select a new 3D model. When you use the Distribute 3D Objects tool, you can select a 3D model to distribute to other drawings. Previously, you could only distribute a 2D drawing.
