IOS Crash Logs Tool Download X64

iOS Crash Logs Tool is a piece of software that allows you to load crash reports files for symbolicating. The application searches for debug symbols that are created when an app is compiled and are inserted into the outputted binary file. The symbols are for interpreting track traces which come in very handy when someone sends a crashdump to you because you can use the original dSYM file for debugging. iOS Crash Logs Tool displays a more than comprehensive interface and is written in C++ and C# and can automatically link crash logs with dSYM files. To use it, you need to have the crash report files and load them into the application. This can be done in two ways. If you know the location of the required files you can simply drag them onto the application and when releasing the mouse click, the items are added. If you can't find them, them iOS Crash Logs Tool enables you to use its search function and locate them on your hard drive. Depending on the size and complexity of the partition on which you are looking for the files, the search can take a while. After the files are loaded, their content is displayed in categories such as 'Applications', 'Crash Logs', 'Debug Symbols' and 'Libs'. If after the search, you want to see the location of a file, then the application allows you to view it in the Explorer. iOS Crash Logs Tool is a very handy tool for your app development as it enables you to effortlessly view the exact lines of code that caused a crash. Moreover, all the information that is displayed, can be copied and inserted into a text file or code editor. In closing, if you're looking for a simple and straightforward utility, to help you out with crash logs symbolicating, then you can certainly try iOS Crash Logs Tool. AppZapper is a mobile phone data scraper designed for extracting data from a multitude of mobile apps and mobile websites, it supports all common mobile browsers, and works on all major mobile platforms, including iOS and Android.
