Although iTunes is installed as part of OS X by default, it is not a system component and does not require the Mac to operate. It can be removed or uninstalled without any adverse consequences. Features Importing iTunes can import any songs that are compatible with the iPod and iPhone. It can import using CD tracks, music files, or iTunes Radio. Importing iTunes can import any songs that are compatible with the iPod and iPhone. It can import using CD tracks, music files, or iTunes Radio. Alternatively, you can import your songs to iTunes by dragging them from your computer to the iTunes window. iTunes will then ask if you want to create a playlist from that folder or add the music straight into a playlist. Note: The first time you import music, it will appear in your music library in a new, blank playlist. You can access this playlist by double-clicking the playlist in the list on the left, and it will be available in the list on the right. To change the type of music you wish to import, simply click

and drag the playlist to the appropriate list. The iTunes import dialog gives the following options: Import Options Import from: Location: This is where you select the music file that you want to import. iTunes can import all formats including.m4a,.mp3,.wav,.ogg,.aac,.wav,.m4a, and.mp3 files.
