Many studies have proved laparoscopic surgery for colorectal disease an effective and safe technique, comparable to conventional surgery. Surgeons are slowly switching from conventional to laparoscopic colorectal resection. The shortest operation time recorded by the first group of authors in a prospective study of laparoscopic right colectomy was equal to conventional surgery. The oncologic safety of the laparoscopic approach is now well documented. A metaanalysis of several prospective randomized controlled studies has shown lower incidences of wound infection, intraabdominal abscess, abdominal pain and ileus in patients treated laparoscopically for colorectal disease. Patients were more satisfied with their cosmetic results, and there was evidence of a lower rate of adhesion formation. Other advantages included a significantly shorter hospital stay and quicker recovery. Although laparoscopic colorectal resection takes more effort, it is at the same time a fast, precise and secure method. d0c515b9f4
