1. **Accessing the Photoshop Elements image library.** Choose File⇒Place to open the Place dialog box, which enables you to browse the library for image files you want to import into the program. You can then select the image files you want to open in the program and place them in the lower left corner of the dialog box, where you can view previews of each image. If you have installed the Starter Kit, the Places toolbar (at the top of the dialog box) enables you to access the appropriate Places to access various items stored in the Elements library. If not, you can find more details about accessing the Elements library in the next step. 2. **From the Places toolbar, open the tab for the Places library.** The Elements library has many subtabs with names that reflect the various categories of the library. Each subtab includes a list of subcategories and subsubcategories, which helps you to organize the files you store in the library. If you are using the Starter Kit, the Places toolbar is set by default to Elements Library and its subtab. If you have not yet completed the Basic Tutorial and have an Elements library on your computer, the Places bar doesn't appear. To open the Elements library, use the following steps: 1. **Click the File tab to open the Photoshop.** The library opens in the middle of the screen. 2. **Select the subtab that contains images, and then click the item in the image list to open that image.** You'll find that the subtab is automatically displayed when you click the tab in the library to edit images, but if not, you can click the item in the list to see that particular image file.

Q: Why my Comparator's Function isn't working? I am having a small problem. I've been practicing on Java for 2 month now so I'm a beginner. This is my latest code in which I am trying to sort a Class object by the function "order". If I remove the "order" function then it works well. If I add it, the program crashes. Can someone help me? Sorry I can't show you a copy of the code because my code is on a school website. Thank you very much! A: In the end, with our help, he said that the program was crashing because of memory problems. I didn't manage to find the problem but that is what we were told. And we ended up creating a new code but with a new issue that was a new problem that was solved by changing a couple of lines of code. Thank you guys for your help! e0c5546f0d1a3398de002000

On a new layer, select the Brush tool. On the Tool Options bar, choose an edge or painting brush. The default Brush settings are fine for most applications. The Brush is used to apply a series of dots, lines, or patterns to your image. In addition, this tool can be used to create artwork, including paintings and sketches. To make this tool easier to work with, use the following steps to create some dots and lines. 1. **Start with a new layer.** 2. **Use the Ellipse tool to draw a large circle on your canvas.** 3. **Select the Brush tool. Choose Size 1 and fine-tune the size of the brush as needed.** 4. **Choose the Brush tool as before and paint on your circle.** 5. **To finish, tweak the colors as needed.** If you have Auto-Enhance checked, the Brush tool may create artifacts, because it's so new. If you want a true line, switch to a Pencil, use Stylus in the tool options, or add a new layer. 6. **Use the Eraser tool to remove any extra lines from your Brush strokes.** 7. **Save your file and try some other brushes and effects, such as the Brush tool's drop shadow, or the Brush tool's other brush options.** ## Adding text to your canvas Adding text is similar to the Brush tool, but with a few important differences. A text layer may be used for a different type of image effect. If you've created an image for social media, such as Facebook and Twitter, you can use a text layer to add text to your image before you publish the image, just like you would with the Brush tool. To add text, follow these steps: 1. **On a new layer, select the Text tool.** 2. **Choose a font and type your message on your canvas.** 3. **Adjust the size and position of the text as needed.** If the text is too small, you can use the Object > Expand command to increase the size of the text. 4. **To add a drop shadow, the easiest way to create a drop shadow is to set a new layer style with a drop shadow.** Follow these steps to create a drop shadow on a new layer: 1.
