Upon its release in 1982, AutoCAD was the first CAD program to create native software, rather than relying on proprietary data formats from its software vendors. As CAD programs evolved, the native software format was supplanted by various proprietary formats, including AutoLISP and the later, native formats used by AutoCAD LT and AutoCAD Architecture. This article provides information on the history of AutoCAD, the various product versions, new features added in each release, and the history of the user interface. AutoCAD in the 1980s Software developer At its inception, Autodesk used their internal development team, called System Software Development (Sydney-New York), to create a program called "Frame/Disk". It was developed on a computer with a Displaytalk graphics board and an Apple IIe computer with a CPM/6800 processor. When Syd's team was put to work on AutoCAD, the development team at Autodesk came from within the Syd's team. This enabled the development team to make the transition from Frame/Disk to AutoCAD. AutoCAD was written as a single program consisting of a front end and a back end. The front end of the CAD program was also developed by Syd's team in early 1984. Early on, Syd's team worked on the first version of AutoCAD. In the summer of 1984, Syd's team had completed the initial design of AutoCAD. It was a 14-page Apple IIe program that was originally called "Frame/Disk", but later on they decided to call it "AutoCAD", with a small "c". Early applications The first version of AutoCAD was initially called Frame/Disk. It was designed to use the Apple IIe computer's Displaytalk Graphics Board, but was limited to the Apple IIe computer because of the restrictions of the Apple IIe platform. This CAD software was designed to be very simple, but the first version of AutoCAD was priced at US\$795. When the price was reduced to US\$499 in 1984, it became very popular. In 1985, the cost of AutoCAD was reduced to US\$299 and it became the industry standard CAD program. The CAD software was one of the first Apple II software packages to be commercially released. Razor Board In February 1985, New York Computer Products (NWP) released the Razor-Chip 14
