Layers: Photoshop layers are workspaces to store information on an image and manipulate that information. (See the earlier sidebar "Best options for layering images.") Many of Photoshop's commands apply to layers as well as the document they're in. You can choose from several perspective, or "window," views of a layer, and move, copy, and delete layers. You can work in layers-only mode or apply many common techniques to a layer's contents. To see how layers work, refer to the sidebar "Best options for layering images." Top rows in the Toolboxes: The three rows on the top of the workspace offer the usual assortment of basic editing tools. These tools and actions are used throughout the book to add and alter images. Learn more in Chapter 8. Choose an Edit tab: The standard set of Edit tabs always include both a History and a Levels window. When you click the History tab, the History panel opens, as shown in Figure 1-7, so that you can track changes in your image. **Figure 1-7:** The History tab offers an array of tools that let you undo, redo, correct, and make changes to images. The Levels control is an essential tool for editing images. The tools within the Levels window control the overall exposure of images and allow you to open them up to a greater dynamic range. Bottom rows in the Toolboxes: The two rows on the bottom of the workspace contain a few of Photoshop's more specialized tools, including the Spot Healing Brush, Lasso, and Magic Wand, as well as a few others. You may even discover a tool that's not listed here, because Photoshop has features — like vignetting — that don't fall into a category. To access more tools with a keyboard shortcut, choose Edit⇒Preferences, click the Keyboard icon, and then choose the Shortcuts tab. Help: All programs provide an onboard Help system in various forms to offer explanations and help with operations. Photoshop Help files are located online at HelpinPhotoshop.com/help.html. Use the Tools palette Photoshop's palettes serve the same function as those of other graphics programs and include a collection of tools and utilities. The top row contains many of the basic tools you need for image editing, as shown in Figure 1-8. To the left, you can see the 5x, 10x, and 25x tools in the Toolbox.

Rory McIlroy is predicting a change in the European Tour's rules of golf on his return to the PGA Tour. McIlroy, who won his third Major championship of the year by capturing the Masters title in April, will return to action in the US this week. And while it's not a major, McIlroy is now threatening to launch a push for change in the scheduling of the FedEx St Jude Classic next February. McIlroy, who defeated Jon Rahm in three playoff holes at Augusta, is very frustrated with the current schedule as he enters an event in the US that is the longest in terms of travel. "Looking at the FedEx St Jude Classic, it's going to be a six-hour flight to Memphis in December, and then a seven-hour flight back," McIlroy said. "That doesn't make any sense to me. Guys are playing at places like the Canadian Open, the Memorial and the British Open in May. They're not going to make it down there in December. "The old golf schedule, it was really good. But if the PGA want to get the bigger events in January in different markets, that's fine by me. "I'll play them. I'm not going to hold up the US Open for the European Tour. That's not my job." The FedEx St Jude Classic on the PGA Tour is the first Major of the year and McIlroy feels it's one of the best in terms of player welfare. "The FedEx St Jude Classic is one of the best. In Orlando you have a ton of hotels that you stay in and you stay in nice hotels," he added. "It's a big event. You're a major champion, you're a big draw. You get to play the tournaments in the States. You get to hang with big stars. "It's just a great deal for players because we're not flying all the way to South Africa in February or Miami in June or wherever. There's not a lot of that. And as the player's getting older, the longer we stay on the road, the less fit we're going to be. "But if they're going to make the big events earlier, I'm fine with that. It's a great event. I like playing it. I

Q: Adding more than one object to a grid using tensorflow I have been learning tensorflow recently and decided to make my own model for binary digits (ones and zeros) addition. This is what I have created so far: model = Model(input=tf.placeholder(tf.float32, [None, 8], name="image"), output=tf.placeholder(tf.float32, [None, 8], name="image")) so one image is presented to the input placeholder and used as an addend and the output placeholder shows the result. I have managed to make it work when I present only one addend, but I fail to make it work for two addends. Here's an example of the code I am trying to use: # model input placeholder input = tf.placeholder(tf.float32, [None, 8], name="image") # model output placeholder output = tf.placeholder(tf.float32, [None, 8], name="image") # without broadcasting a = tf.reshape(input,[8,8]) b = tf.reshape(input,[8,8]) # with broadcasting a = tf.tile(a,[[2,2,1,1],[2,2,1,1]]) b = tf.tile(b,[[2,2,1,1],[2,2,1,1]]) res = a + b Please help! A: If you want to add the two 8x8 tensors, you need to add them as single dimension vector. You can do it like this: # without broadcasting a = tf.tile(a,[[2,2,1,1],[2,2,1,1]]) b = tf.tile(b,[[2,2,1,1],[2,2,1,1]]) a_dims = tf.stack([a.shape[0],a.shape[1],a.shape[2]],axis=1) b_dims = tf.stack([b.shape[0],b.shape[1],b.shape[2]],axis=1)
