On 2nd January 2015, the channel had been rebranded as Zee Cine Awards 2014.Q: R caret Random Forest misclassification I'm building a prediction model using the mlrandomForest package. Random forests tend to be great at classification tasks (see here), but not so great at regression tasks. However, I'm having trouble figuring out how to make the predictions more accurate. I'm predicting 6 values (all numeric data) from a 12-sample cross-validation set, but I'm also using the underlying predictions to compare them. I'm using the minimal working example below. The training accuracy is 0.83 and the validation accuracy is 0.79. Both sets of predictions are more accurate than the output I get when not using the underlying predictions, which is 0.4. How can I improve my classifier? library(caret)
