What's New In?

The Brush tool is a basic painting tool in the program. It allows you to paint, erase and apply various effects to your image. There are two types of brushes, Dynamic and Cloned. Dynamic brushes are the main types of brushes found in Photoshop. A default Dynamic brush is the Airbrush, shown here. It has nine variations, each named after one of the nine classical elements: Air, Earth, Fire, Water, a selection of the four cardinal directions: North, South, East and West, and a selection of the four seasons: Spring, Summer, Fall and Winter. This brush is available as an option when you first open Photoshop or when you select the Brush tool. A Free Transform Brush is also available. It has four variations: the perfect regular brush, the popular feather brush, the soft-feathering brush, and the custom brush. Each type can be accessed via the Brush tab of the Tool options. Normally, Photoshop brushes are grouped together and stored in a brush palette. However, you can also use them in their own palettes with the help of a dynamic brush. In the image above, the main brush palette has been replaced by a dynamic brush palette. The available brushes are shown as options for the brush. As you continue using the brushes, their look and behavior will change. The main brush palette needs to be set to the current brush when it changes to the new brush. Bristle Brushes in Photoshop. As you can see, the Bristle brush has four variations. Although they have the same basic behavior, each has a specific effect depending on which type of brush you use. The Hair brush is a brush that is meant to make brush strokes look like hair. It produces some very interesting results, and can be used to create very interesting effects. There are five different variations of the Bristle brush. The Lazy Brush is a brush designed to give a very soft, blurred effect to your image. This brush, like the others, has four variations, all of them available via the Brush tab of the Tool options. Lazy Brush The Static Brush is similar to the Lazy Brush. It is meant to give a very soft, blurred effect, but also produces an interesting blur effect when used at a low opacity. Static Brush The Spatter Brushes allow you to add splatters to the image
