What's New in the AutoCAD?

Model based drawing creation: Create a drawing with information from linked files or from a template. (video: 1:00 min.) Save/Export Drawing Conversion: Create a PDF document for a finished drawing. (video: 0:45 min.) Technical improvements: Refresh faster than ever, and handle more users at the same time. Optimize network data consumption. See an overview of our product roadmap on our website. Many new features are enabled by AutoCAD Architecture. What's new in AutoCAD Architecture In AutoCAD Architecture, you'll be able to store shapes and annotations on the Architecture Components, which is in turn referenced by other Architectural components. This allows you to reuse those annotations and shapes as-is, no matter where they are in the drawing. A new construction component in AutoCAD Architecture provides the ability to see a sequence of drawings as you go, with a view of each drawing as it is created. This component also displays drawing comments in the Comments panel. In order to create a watertight drawing, you can include a Reference Component in your drawing. This Reference Component can be an existing DWG file, a DXF or DWF file, a DWI or a DXI file. Using an existing file in this way can allow you to share a drawing with many people without having to create a new DWG file. In AutoCAD Architecture, drawings are created by linking DWG files. The Link Drawing Component in AutoCAD Architecture can be used to create links to DWG files. New toolset: make a seamless cut in a DWG file without having to perform a complex polyline operation. It is possible to create even complex polylines from the boundary of the existing drawing, for example when a new door is inserted in an existing frame. In AutoCAD Architecture, you can create an AutoLayout and use the vertical and horizontal guides for your drawing without having to work out the exact placement of each AutoLayout object. In AutoCAD Architecture, you can create a boundary object in a drawing with the boundary of a pre-existing room and any adjacent walls, doors and windows. The boundary of the room is defined by adding a boundary object to the geometry. In AutoCAD Architecture, you can set the selected line to include the line end points and bevels. This allows you
