Q: Novel about a man travelling in time to fix broken future Quite a while ago I read a sci-fi book about a man who travels in time. He travels to the future, when things are a bit broken. He fixes it by altering a particular person or event. I can't remember the name or even the author. A: You're thinking of "A Step into the Future" by Robert Shekley; it's a play on the time-travel aspect and the ending is similar to what you describe, with the protagonist ultimately fixing the dystopic future where they were from. [Current results after extended joint endoprostheses]. In a group of 75 patients with 116 endoprostheses of which 55 (88%) were knee endoprostheses, with a mean follow-up of 54 months (range: 25-180), we evaluated whether pain, gait and range of movement improved after the prosthetic treatment. In 50 (83%) patients the clinical status improved, of whom 46 (72%) patients were asymptomatic and the mean range of movement was + 3.5 degrees. There were 6 failures (6%) in the series. Our results are better than those of other authors.Q: How to redraw the WPF border by using mouse I wanna add a border to a rectangle. I'm making a website that will let users search around a certain location, and I'm trying to figure out the best way to implement a search engine for that location. My first thought was to have the database calculate a location field that stores the street address of the location, then use the geocoder service to translate it to GPS coordinates, but my google-fu is lacking and I can't find any solid information about this on the internet. Does anyone have any ideas on this? Should I just stick with the database, or is it okay to use the geocoder as a front-end service? Thanks! A: It's common to use your own geocoding service instead of relying on a free service like Google. It's easy to implement, and more private information is yours to control.
