containing AMI ROM BIOS firmware on a Gigabyte GA-486TA Baby AT motherboard from 1992. Download as PDF · Printable version . But how do you get the binary file ready for flashing from the AMI-BIOS to your motherboard? Downloaded the latest versions. AMI as any other software company creates bios rom files, this is a binary file. Blockchain: the fourth industrial revolution - rplnt ====== rplnt > but it could also be, and maybe even has to be, a second industrial > revolution. This is _the_ question mark. Does we need a 'new' industrial revolution? Should it be centralized or decentralized? What happens if it ends up being cheaper to use it as a monopoly? What happens if the same rich folks who put the techno-progress on this path now buy enough influence to stop it? What is the stance of the smaller nations? How

will we handle the fact that our datacenters are too big to be attacked? That the participants can choose their business models? That software is fast? That we cannot afford stopping the current progress? That we're too exhausted to prepare now for the radically changes in the world? Q: WCF asynchronous calls not returning the value as expected I have a method that is called from a client and is sent a token after a user has authenticated. This token is then checked to see if it is an active token. If it is an active token the method returns the active token to the client. The token that I am checking against is a Zimago token. I have an active token in the database. When I call the WCF service the token is returned as expected. However when I check for the active token against the database, it is always the same as the

token sent by the client even though the token sent by the client is different. I use the same token checker from other places in my service where I am not having the same issue.
