Office 2017, 2016, 2018,
2019 Activator of an
innovative home-based
integrated diet on lifestyle
behaviors and metabolic and
inflammatory markers
among overweight and
obese participants. The
purpose of this randomized
controlled trial was to
examine the effects of a
home-based integrated
program on weight loss, diet,
physical activity, metabolic
health and inflammatory

markers among overweight and obese participants. Eighty-two participants (60 % women) with mean BMI=33.3 kg/m² were randomly assigned to either home-based integrated program (N=40) or usual care (N=42). Weight loss, lifestyle and metabolic markers were measured at baseline and after 6 and 12 months, respectively. After 6 months there was no statistically significant difference in weight loss (5.1 vs. 5.4 kg) or physical

activity ($p > 0.05$) between the two groups. At 12 months, the integrated program had a significantly higher diet quality score ($p=0.009$) and significantly lower fat and saturated fat intake ($p=0.034$ and 0.038 , respectively) as compared to the usual care group. The integrated program increased daily fruit consumption ($p=0.056$) and decreased daily consumption of sweets ($p=0.041$) as compared to the usual care group.

Regarding metabolic variables there was a significantly greater weight loss (9.1 vs. 4.3 kg; p School-to-Prison Pipeline for Youth with Autism - kf 6d1f23a050
