Directory mappings redirect relative file paths to physical directories on your server. To specify directory aliases at the server level, use the Mappings page. For .NET Framework 4.0, .NET Framework 4, and .NET Framework 4.5, you can use the compose command to create aliases and then use the mappings command from the System.Linq.Mappings namespace to redirect the path. For example, the following query maps the path for all files in the "/home/user/MyProject.docx" subdirectory to the path "/home/user/Documents/MyProject.docx", creating a directory alias for "/home/user/Documents/MyProject.docx":

There are few examples of the success of large prospective cohort studies in the development of specific areas of research. This paper presents the background to the Prospective National Family Planning Programme (PNFP) study. It provides a preliminary description of the study, and describes the pilot phase, and outlines the study protocol, setting objectives and study population. The study draws data from women's responses to a demographic survey and a clinic questionnaires. The pilot study has demonstrated the feasibility of the proposed cohort study, but also highlighted some of the complexities that will be encountered during the main study. In particular, the small and highly mobile study population, the social stratification of study population, and, most importantly, the complexity of data collection.Sailing in monomotor (manually steered sailing ship), so the first pass was considered a victory with one of the few, if any, hardy specimens of the seal class, Bigwig.
