

Cours Archicad 15 Gratuit ((FULL))

In this tutorial we will look at how to connect walls with a roof in Archicad. We will create a project that consists of three walls and a roof. The walls will be on different levels and have different degrees of curvature. First, using the "New Wall" command we will create two walls at the top and bottom of the room. They will be vertical and straight. Draw one wall on the left side of the room and the other on the right side. Then create a horizontal part of the wall on the left side and a horizontal part of the wall on the right side. Using the "New Triangle" command, create a triangle on the right side of the wall.
