xanthenes. Aims to increase patients' confidence in
the use of. the) but what works for them does not
work for everyone. (15) 21/07/2010. Information
Resources: This subproject is one of many research
subprojects utilizing the resources provided by a
Center grant funded by NIH/NCRR. The subproject
and investigator (PI) may have received primary
funding from another NIH source, and thus could
be represented in other CRISP entries. The
institution listed is for the Center, which is not
necessarily the institution for the investigator. The
goal of this project is to characterize the FK506
binding proteins (FKBPs) in the cell as a way to

characterize possible mechanisms of action of FK506. Expression in cell lines, purification from lysates, inhibition of binding using various ligands, and crystallographic analysis of a purified protein with FK506 will be the primary focus of the project. We also plan to use cellular imaging techniques to monitor the subcellular distribution of these proteins. As an adjunct to this project, we also propose to conduct crystallization experiments with the FK506-FKBPs complex.
